

Installation Check

It is recommended to check your installation of Microsoft Java Virtual Machine software first before proceeding, you can see your current build number in the textbox below. If the textbox is still empty after you have installed the Microsoft Virtual Machine, check out the document that you will find here, this document contains several links on which you can also check if your Java Virtual Machine is working

Microsoft Java VM build number detection.

If nothing appears in this box within a couple of seconds, you do not have Microsoft Java support installed. In that case, download and install JVM Build 3805 first and then the upgrades. Windows 2000 SP4 users should check the Windows 2000 tips section to solve their problems with Microsoft's Java Virtual Machine.

Note: To test your browser's java functionality you could also go to one of the sites below:
